

### Rain barrels: use what nature provides to water your plants!

Take advantage of the water nature gives us. Using a rain barrel or cistern to collect rainwater can lower your water bill, be good for your plants, and protect the environment by reducing runoff from your property.

The NC Cooperative Extension - Onslow County rain barrels are made using repurposed food-grade barrels, so they also help with “reduce, reuse, recycle”. The completed rain barrels come with a brass faucet, an overflow pipe, and a screened water inlet. The fee per rain barrel is \$50.

The rain barrels, which serves as a fundraiser for some of our Extension programs, are very popular. Please stop by the Onslow Cooperative Extension office to see the rain barrels. Call (910) 455-5873 if you have any questions. Sales are first-come, first-served and will continue until the supply is sold.
